02/2025 – CURRENT

BSc in Computer science Virtual university of Pakistan

SKILLS

Web Development

- HTML
- CSS and its framework Bootstrap
- JavaScript
- React JS (ongoing)

Intermediate knowledge in C++

PROJECTS

Save Url extension

In this project, I created a Chrome extension in which you can manually save an input and you can save the current opened tab. To delete the saved URL, double click the Delete button. Save tab button only works when you use it as an extension.

To Do List

For this project, I took the idea from ChatGPT and the design from the internet. I built this App using HTML, Sass and JavaScript. This project also has Accessibility for screen readers. And added items are stored in local storage.

Replicating project

I found this Project from some frontend practice website and I tried to replicate that website. For this project I used HTML, JavaScript and CSS. This is my first real life like project.

Black Jack and Incrementing

This is my first project where I used JavaScript. I created this project by following a tutorial on YouTube. I combined two projects into one file because, if I had created them separately, the page would have felt blank.
